

ADME NTP Study S0440 tris(1,3-Dichloro-2-propyl) phosphate

The contract laboratory used the synonym Fryol-FR2 and the abbreviation Fryol for the test article.

Sex/Strain: not specified; Animals used were rats.

Vehicle: intravenous, aqueous Emulphor 719 (25% v/v).

CASRN 13674-87-8

Radiolabeled with carbon-14 in the 1- and 3-position carbons of the 2-propyl moiety; tris(1,3-Dichloro-(2-propyl-[1,3-¹⁴C])) phosphate

Studies Performed:

- Single intravenous administration of 803.2 nmole Fryol/rat with sacrifice 5 days postdose (n=4).
- Single intravenous administration of 803.2 nmole Fryol/rat with sacrifice 24 hours postdose (n = 2, bile excretion study).
- Single intravenous administration of 803.2 nmole Fryol/rat with sacrifice at 5 minutes, 30 minutes, 8 hours, and 24 hours postdose (n=2 per timepoint).

The minimum detectable quantity of Fryol was 0.01% dose/g tissue. Metabolism to bis(1,3-dichloro-2-propyl)phosphate (BDCP) was the major route of elimination of Fryol.

Toxicokinetics:

Fryol disappeared rapidly from plasma (half-life of < 5 minutes) accompanied by a rapid rise in BDCP. After 2 hours, the concentration of BDCP declined with a half-life of approximately 4 hours. The log concentration-time curve was plotted (figure not shown) but no modeling was performed.

TABLE 1

CUMULATIVE EXCRETION OF RADIOLABEL AFTER IV
ADMINISTRATION OF ^{14}C -Fyrol^a

HOUR	URINE	FECES	$^{14}\text{CO}_2$	CARCASS	TOTAL
24	45.73(4.79)	9.97(7.09)	18.73(1.33)	-	74.43(10.48)
48	51.60(3.81)	15.39(3.95)	20.75(1.47)	-	87.74(4.01)
72	53.46(3.13)	16.02(3.43)	21.50(1.58)	-	90.98(1.58)
96	53.83(3.15)	16.36(3.15)	21.94(1.66)	-	92.13(1.06)
120	53.99(3.14)	16.44(3.11)	22.20(1.68)	3.75(0.13)	96.38(1.07)

^aThe quantity of radiolabel excreted in urine and feces and as expired $^{14}\text{CO}_2$ was determined at 24 hr intervals for 120 hr in four rats after administration of ^{14}C -Fyrol. Numbers in the table represent the cumulative percentage of administered radiolabel recovered. Numbers in parenthesis represent standard deviations.

TABLE 2
 EXCRETION OF RADIOLABEL IN CONTROL AND BILE-EXTERIORIZED ANIMALS
 24 HR AFTER IV ADMINISTRATION OF ^{14}C -FYROL

	CONTROL ^a	BILE-EXTERIORIZED ^b		
		Exp. #1	Exp. #2	Mean ^c
URINE	45.73 (4.79)	37.69	43.84	40.77
FECES	9.97 (7.09)	0.42	1.08	0.75
$^{14}\text{CO}_2$	18.73 (1.33)	10.46	11.43	10.95
BILE	-	31.61	28.16	29.89

^aPercentage of administered radiolabel. Mean of four rats.
 Standard deviation in parentheses.

^bTwo rats (Experiments 1 and 2) with exteriorized bile flow were studied.

^cMean of experiments 1 and 2.

^aPercent administered radiolabel recovered in tissue. Mean of two determinations except for 120 hr which represents mean of four determinations. Numbers in parentheses are standard deviations.

^bPercent dose per tissue calculated using estimated total tissue mass.

^cCumulative recovery of radiolabel.

TABLE 6
RECOVERY OF FYROL AND BDCP AFTER IV ADMINISTRATION OF ¹⁴C-FYROL

The dose of Fyrol was 803.2 nanomoles. At each time interval after dosing the total Fyrol or BDCP was determined by adding the quantities found in individual tissues, carcass, and excreta.

TIME	Fyrol nanomoles	BDCP nanomoles
5 min	430.9	128.1
30 min	145.1	216.7
8 hr	4.4	447.1
24 hr	- ^a	473.8
120 hr	- ^a	505.2 ± (78.8) ^b

^aQuantity below detectable limits of assay

^bMean ± SD, n = 4
