G04: In Vivo Micronucleus Assay Summary Data (Study Method: Flow Cytometry)

Study Number: C13114-01
DTTID: 104-015-005-000-6
Study Type: Toxicology-14-day
Species/Strain: Rat/Harlan Sprague Dawley

Test Compound: 2-(2H-benzotriazol-2-yl)-4-tert-butylphenol
CAS Number: 3147-76-0
DTXSID: DTXSID7062871

Date: 14 May 2026
Time: 3:32:20 PM

Evaluation of micronuclei in peripheral blood from Sprague-Dawley Rats for 14 days via oral gavage

Summary of Results

	Results
Overall Result	Negative
Male Rat Study	Negative

G04: In Vivo Micronucleus Assay Summary Data (Study Method: Flow Cytometry)

LEGEND

CAS Number = Chemical Abstract Service registry number

MN = micronucleated; RET = reticulocyte; ME = mature erythrocyte

Values given as Mean ± Standard Error of the Mean (SEM) [Number of Test Subjects], p-value

MN-RET/1000 and MN-ME/1000: Pairwise comparison of treated groups vs the vehicle control group; values are significant at $p \leq 0.025$ by one-sided Dunn's test; dose-related trend, significant at $p \leq 0.025$ by one-sided Jonckheere's test

%RET: Pairwise comparison of treated groups vs the vehicle control group; values are significant at $p \leq 0.025$ by two-sided Dunn's test; dose-related trend, significant at $p \leq 0.025$ by two-sided Jonckheere's test

*Statistically significant pairwise or trend test
