

Figure 3. Dose–response curves for compounds identified as active in both ERR and PGC/ERR. Cell lines, agonists (A, B) and antagonists (C, D); black squares, ERR line; black circles, PGC/ERR line; open squares, cytotoxicity for ERR line; open circles, cytotoxicity for PGC/ERR line; X axis, concentration of compounds; Y axis, response, as a percentage of the positive control. All data points are shown as mean  $\pm$  SEM from three independent experiments.
