

How Do I Find Controlled Vocabulary?

Answer: DTT supports FAIR data principles <https://www.go-fair.org/fair-principles/>. One component of FAIR is to ensure that data are interoperable with applications and workflows, and in particular, that “(Meta)data use vocabularies that follow FAIR principles”.

In support of this aim, DTT developed the DTT Data Dictionary (DDD), a list of terms, metadata and endpoints used in DTT studies. Links to external ontologies or other external IDs are included where available. The DDD, available at <https://cebs.niehs.nih.gov/cebs/paper/15466>, is growing as data are consolidated and will be updated approximately monthly. Older versions of DDD are also available.
